

Plant Health Care

Shreiner Plant Health Care

Shreiners' Plant Health Care (PHC) program is a comprehensive schedule of inspections and treatments of your landscape. Our team of ISA Certified Arborists trained in entomology and pathology provide regular inspections of your trees and shrubs to manage the ever-changing conditions in your landscape.

During Our Visits

During each visit an arborist will perform a thorough inspection of your plants and their growing conditions. Any active or anticipated disease and insect problems will be treated as needed. We will provide a written report of observations and recommendations for your benefit including specific action steps that will improve the health and appearance of your landscape.

Conditions Affecting Tree Health

In addition to insect and disease problems on your trees and shrubs, our arborists are also looking for site conditions which commonly stress plants. Excessive irrigation, soil compaction, improper soil pH, and improper mulching predispose your plants to insect and disease issues. Our recommendations will help better manage the health of your landscape.

Services

- Insect Control
- Disease Control
- Fertilization
- Bio-Stimulants
- Tick Control
- Deer Control
- Winter Protection for evergreens
- Emerald Ash Borer Control

Our arborists inspect each tree and shrub on the landscape for any active and anticipated insect or disease problems.

Shreiners' arborists use specialized tools to make informed decisions regarding tree health and safety.
